# ABSTRAK

Menggunakan analisis bibliometrik yang dikombinasikan dengan analisis kualitatif, penelitian ini mengumpulkan dan menganalisis 662 artikel mengenai Inovasi Kebijakan, diterbitkan di database WoS dari 1994-2023. Artikel ini berkontribusi pada pemahaman lebih lanjut mengenai Inovasi Kebijakan berdasarkan penelitian (Pradana et al., 2022). Hasilnya menunjukkan bahwa penelitian mengenai Inovasi Kebijakan mengalami perkembangan dalam hal publikasi dan sitasi. Kontribusinya datang dari seluruh dunia, namun mayoritas berasal dari Amerika Serikat. Sebagian besar publikasi menerbitkan artikel empiris, dengan penulisnya dominan menggunakan metodologi kualitatif. Selain itu, kolaborasi antar penulis mengalami peningkatan. Topik mengenai Inovasi Kebijakan telah diteliti diberbagai bidang penelitian seperti *policy variation and innovation diffusion, environmental policy and governance, health system governance, innovation in climate adaptation policy, state level government and policy innovation, suitability of outward state education reform and EHA method*, dan *climate change and mitigation*. Analisis regresi menunjukkan bahwa faktor kinerja sitasi yaitu panjang abstrak memiliki hubungan signifikan terhadap kutipan. Berdasarkan ulasan tersebut, penelitian ini menyarankan 15 pertanyaan untuk penelitian lebih lanjut.

kata kunci: bibliometrik, inovasi kebijakan, analisis kinerja sitasi

ABSTRACT

Using bibliometric analysis combined with qualitative analysis, this study collected and analyzed 662 articles on Policy Innovation, published in the WoS database from 1994-2023. This article contributes to further understanding of Policy Innovation based on research (Pradana et al., 2022). The results show that research on Policy Innovation has grown in terms of publications and citations. Contributions come from all over the world, but the majority are from the United States. Most publications publish empirical articles, with authors predominantly using qualitative methodologies. In addition, collaboration between authors has increased. The topic of Policy Innovation has been studied in various research fields such as policy variation and innovation diffusion, environmental policy and governance, health system governance, innovation in climate adaptation policy, state-level government and policy innovation, suitability of outward state education reform and EHA method, and climate change and mitigation. Regression analysis shows that the citation performance factor, namely abstract length, has a significant relationship with citations. Based on this review, this study suggests 15 questions for further research.
